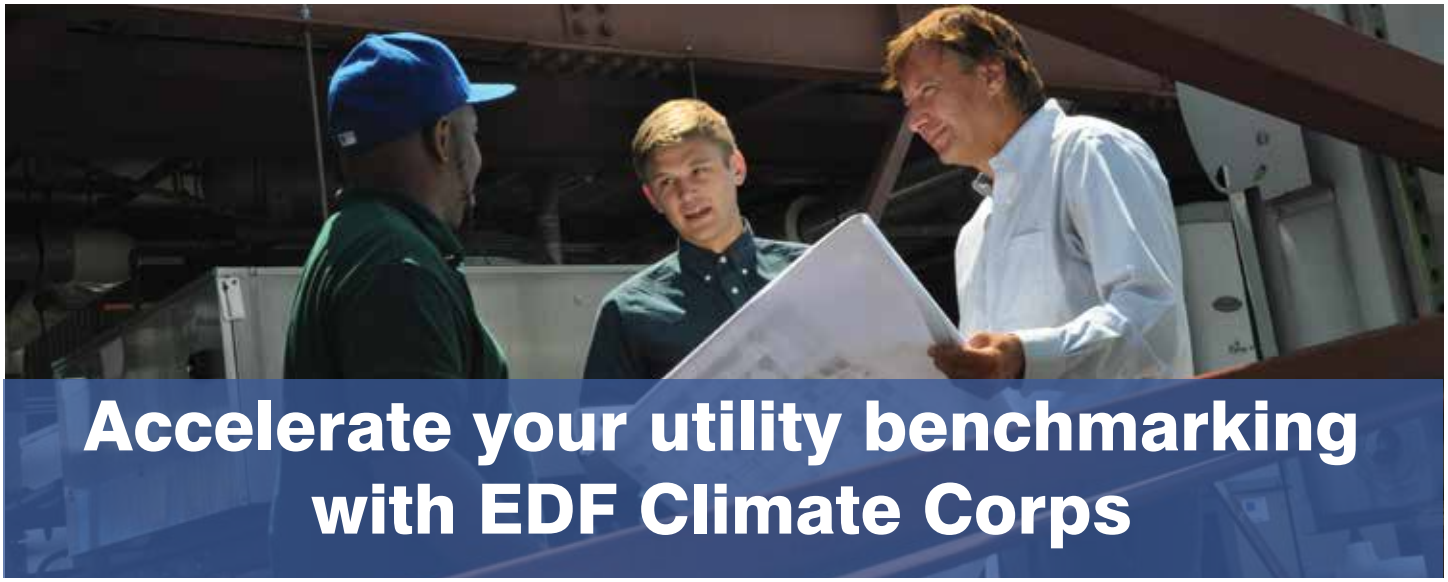
EDF Climate Corps for Affordable Housing

An Initiative of EDF Climate Corps, the U.S. Department of Housing & Urban Development and TDA Consulting



EDF Climate Corps for Affordable Housing is a summer fellowship program that embeds trained, custom-matched grad students alongside your team to accelerate utility projects within your properties.

This summer, the U.S. Department of Housing and Urban Development is offering a limited number of fully-funded EDF Climate Corps fellows to support utility benchmarking efforts with Owners/Managers of HUD-Assisted and Public Housing.

EDF Climate Corps fellows are top graduate students that are trained and ready to hit the ground running with your organization. They'll offer hands-on help with utility benchmarking and will investigate energy- and water-saving opportunities that can drive meaningful cost savings. Mentors from HUD, EDF, and TDA Consulting (one of HUD's technical assistance providers) will guide fellows and provide opportunities for them and their hosts to share challenges, solutions and best practices for building performance in affordable housing.

Hosting a fellow this summer is a no-cost, low-risk way to comply with new benchmarking requirements... and save money!

400+

organizations have worked with EDF Climate Corps, including over a dozen affordable housing organizations.
